

Asset Management

# **AEGON DIVERSIFIED MONTHLY INCOME FUND VALUE STATEMENT**

**AEGON ASSET MANAGEMENT UK ICVC ('UK OEIC')  
WITH A YEAR END OF 31 JULY 2023**

PUBLISHED NOVEMBER 2023

# Introduction

The Value Statement is produced each year for funds in our UK product ranges, covering the 12-month period to 31 July 2023. The purpose of this value statement is to provide investors with a clear understanding of whether each fund offers value for money to its investors.

The following product range is in scope:

- Aegon Asset Management UK ICVC - ('UK OEIC') with a year end of 31 July 2023

## Why do we produce a Value Statement?

The UK regulator, the Financial Conduct Authority ('FCA'), introduced rules in 2019 requiring asset management firms to consider, confirm and communicate whether they are delivering value for money in regard to the UK funds they are managing.

The FCA provided seven criteria that should be used in the assessment, which essentially cover quality of service delivered, costs, performance and how these compare to the market.

The Board of Aegon Asset Management UK plc takes responsibility for this process and has approved this statement. The Board of Directors is responsible for the overall governance of these UK funds. The Board of Directors includes external directors to ensure oversight and challenge of the funds is independent, comprehensive and in the best interests of investors.

The Chairman of the Board of Directors has overall responsibility for delivering this assessment.

As permitted by FCA regulations, we have elected to produce a combined Value Statement. This means we will produce Value Statements for the above product range as at 31 July 2023, to coincide with the UK OEIC fund range's annual reporting period.

The FCA requires managers to assess the following criteria:

- 1. Quality of service** - we consider some of the measurements within this section to be 'baseline' criteria. This includes factors such as:
  - a. ensuring the fund is managed within investment parameters, providing sufficient liquidity to enable investors to buy and sell the fund.
  - b. being readily available to investors, for example by phone, post or fax.
  - c. having a website that is accessible to all investors, which provides a variety of information to enable investors to understand the funds offered for investment.

- 2. Performance** - how each fund has performed, net of charges, over the past year and over the time period referred to in the fund's objective.

- 3. Annual Fund Management (AFM) costs** - highlighting the fund's charging components and whether these are appropriate.

- 4. Economies of scale** - the extent to which economies of scale have been achieved and whether they have been passed on to investors.

- 5. Comparable market rates** - how the fund's charges compare to similar funds in the industry.

- 6. Comparable services** - to ensure a consistent pricing structure is applied for similar funds at Aegon Asset Management UK.

- 7. Classes of units** - whether share classes, and their associated charges, are appropriate and available for investment.

- 8. Other considerations** - we assess other criteria that we consider are important in the assessment of each fund to ensure we conduct a comprehensive oversight in the interests of investors. Examples include liquidity and ESG considerations (see page 5 for ESG definition).

# Update on funds not providing value in 2023

---

There were no funds deemed 'not providing value' in this given period.

We recognise that investment performance is only one element of our overall framework for assessing whether our products are offering value. However, the Board acknowledges that it has been a challenging period for our fund range, given the strong exposure we have to sustainable and ethical themes which, by definition, means we could not fully participate in other investment themes that have driven the returns of many market indices over the short term.

# Helpful terms

---

## Additional Charges

These are the charges on top of the Annual Management Charge ('AMC') that form part of the Ongoing Charges Figure ('OCF'). These items include audit fees and regulation fees.

## Annual Management Charge ('AMC')

This is the charge by Aegon Asset Management UK plc for managing the fund and providing its overall service.

## Investment objective

This describes what the fund is aiming to achieve over a stated period. Typically, this will be to achieve income and/or capital growth over a seven-year period.

## Investment Association Sector

The Investment Association has created a range of sectors and has grouped funds deemed to have similar objectives and strategies into the same sector. For example, funds investing in UK smaller companies can be found in the Investment Association UK Smaller Companies Sector.

## Environmental, Social and Governance (ESG)

Where relevant, we look to incorporate Environmental, Social and Governance (ESG) factors into the investment decision-making in our funds to mitigate risk and uncover opportunities.

While some funds are not explicitly mandated to make ethical value judgements or to impose ESG-related restrictions, the judgement we make reflects the extent to which we believe ESG issues impact a stock or bond's investment case, either positively or negatively. To do that, our fund managers/analysts draw upon the expertise of our dedicated responsible investment team with whom they work closely.

## Responsible investment (RI)

This is an umbrella term that covers various tools and approaches to incorporating environmental, social and governance (ESG) considerations into investment decision-making processes. It may include ESG integration and active ownership as well as dedicated, RI-focused capabilities. Related terms may include sustainable or ESG investing. More information can be found in the Responsible Investment section of our website [www.aegonam.com/responsible](http://www.aegonam.com/responsible).

## Liquidity

Funds invest in underlying securities according to their investment mandate. They also keep a small amount of cash to assist in payment of expenses incurred by the fund. Some underlying securities take longer to sell than others – this can be influenced by a range of factors, such as which index and country the security is purchased from, how many shares are in issue and market conditions. It can take from a few days to a couple of weeks to sell securities and receive the proceeds. However, there are instances where this can take longer.

Liquidity measures how quickly the fund can sell its holdings and receive the cash proceeds. Securities are generally sold to facilitate investor sell instructions. In extreme conditions, the fund may need to temporarily suspend dealing while it sells the required underlying holdings to facilitate the sell instructions. This can happen during extreme volatility, while the Portfolio Manager is seeking favourable prices and/or in instances when a significant proportion of the fund needs to be sold.

## Performance comparators

Funds will generally be compared with their peers in the appropriate Investment Association Sector. The funds may also be compared against a benchmark index. In these instances, the benchmark may act as a constraint, a target or just for comparison purposes. In most instances the funds are measured against a benchmark index and/or Investment Association sector for comparison purposes. For example, the UK Sustainable Opportunities Fund's performance is compared with the Investment Association All UK Companies Sector.

# Aegon Diversified Monthly Income Fund

## Overall Value Assessment

The Board of Directors believe that the fund provides good overall value for its investors.

### 1. Quality of Service

The Board of Directors believe that, based on the areas assessed, the fund offers a good quality of service.

### 2. Performance

The investment objective is to generate income with a target yield of approximately 5% per annum with the potential for capital growth over the medium term (being any five-year period).

The fund has achieved its objective over the five-year period. Over the 12 months to 31 July 2023, the fund also generated a positive absolute return.

Throughout the 12-month period the future path of inflation – and therefore interest rates – was the dominant concern among investors. Sentiment towards this issue swung from initial concern over the strength of inflation to expectations of a slowdown in the rate of interest rate hikes – which boosted markets. Towards the end of the period, sentiment shifted once more to concerns that inflation remained 'sticky', with central banks retaining a hawkish stance as a result.

From a style and sector perspective, there was a rotation in equity markets during the first half of the period out of growth (growth companies' stock prices are predominantly based on expected increases in future revenues and earnings) and into value stocks (companies whose stock prices depend less on future growth and which often trade at valuations below their perceived real value), with defensive sectors generally outperforming more cyclical areas of the market. As we moved through 2023 there was a change in leadership within the market, with growth sectors outperforming their value counterparts. However, in reality the 'growth' rally was driven by a narrow number of large-cap US tech names.

Fixed income markets were volatile over the period, with core government bonds coming under significant pressure, given the higher interest rate environment. Investment grade bonds also struggled initially although they rallied as we moved into 2023 and increased over the period as a whole. High yield bonds, however, were the strongest performers, buoyed mainly by robust corporate earnings.

Despite a difficult start to the period, we took full advantage of the Fund's flexibility to invest across asset classes, with the positive total return achieved over the period as a whole coming from a variety of areas, including global equity income, high yield bonds and bonds issued by banks.

The strongest performing area was our weighting to global equity income, which weathered the volatile conditions better than other areas of the equity market. Having said that, our exposure to high dividend paying equities also contributed positively.

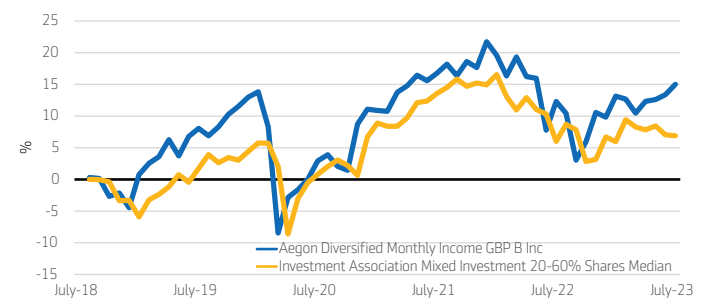

Our exposure to the high yield bond sector added value, as did our exposure to corporate bonds issued by banks. While it was a volatile period for bank bonds, given the stresses seen in US regional banks, the sector has recovered well by the end of the period. We retained a meaningful allocation to European banks as they are financially stronger and more closely regulated than in the past. The high yield sector benefited mainly from robust corporate earnings despite the higher interest rate environment. Our weightings to other investment grade bond sectors, and to government bonds, also added some value but to a lesser extent. It was a very challenging period for government bonds, but the fund's duration (a measure of interest rate risk) was relatively low and this helped ensure the shift up in government bond yields had limited impact.

In contrast, our exposure to listed real estate and listed infrastructure came under pressure. In general, real assets were weak as the benefits of inflation-linked revenues were more than outweighed by higher input and funding costs. Within the real estate sector, our exposure to German and French residential names struggled. UK listed securities (social infrastructure, REITs and renewable energy) were all weak as higher inflation and higher bond yields negatively impacts demand for some bond proxies.

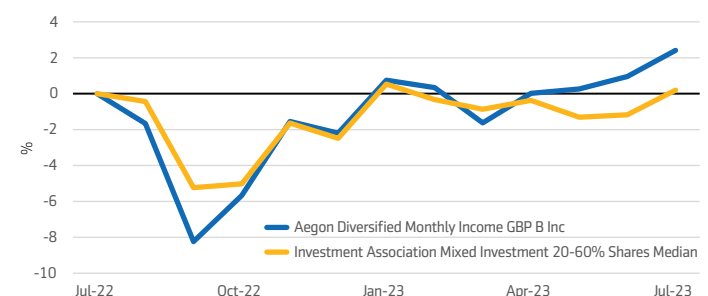

Performance of the fund covering different times periods can be found in the factsheet. Below is a link to the latest factsheet for the fund.

### 5 year performance chart

### 1 year performance chart

The Board of Directors believe that over the longer term (five years to 31 July 2023) the fund has met its objective.

### 3. AFM Costs

There are no entry costs, exit costs or performance fees associated with this fund. Below are the costs incurred by an investor in each share class of the fund:

	B share class (%)
Annual Management Charge	0.55
Additional Charges	0.02
<b>Ongoing Charges</b>	<b>0.57</b>

The Board of Directors believe that the charges are justified in the context of the overall value delivered to the investors in the fund.

### 4. Economies of Scale

The Board of Directors have assessed economies of scale ('EoS') for the fund considering various factors, in line with our value assessment framework. The Board of Directors believe that there are two key areas where benefits can be delivered to investors, namely a) global organisational structure and b) efficiencies due to increasing fund size.

Aegon Asset Management is a global organisation whereby pooled research, pooled resources and mainly globally negotiated vendor contracts are utilised. In the absence of being part of a global structure, the fund would be likely to have higher costs.

The Board of Directors believe that, with more assets in the fund, benefits can be passed on to fund investors. Certain legal, regulatory and administrative costs are fixed (i.e. not directly related to fund size) and are directly charged to the fund. Therefore, with increasing fund size, the relative impact of these costs is reduced.

Due to the current size (around £838 million) of the fund, we do not believe there are sufficient benefits to reduce the already competitive Annual Management Charge ('AMC'). However, as part of the annual value assessment, we will continually review the position and pass on benefits to investors where possible.

### 5. Comparable Market Rates

The Board of Directors compared the fund's Annual Management Charge ('AMC') and Ongoing Charges Figure ('OCF'), at a share class level, against other relevant funds within the same Investment Association peer group.

The AMC is significantly below the Investment Association sector median and the OCF is substantially (almost 40%) below the Investment Association sector median. The Board of Directors' decision to absorb significant costs into its own cost base, namely the Transfer Agent and Fund Accounting costs, which is more favourable to investors than normal market practice, has contributed to a reduction in the additional charges. Investors can see this when they compare the fund to similar funds managed by other providers.

The Board of Directors believe that the fund's costs are fair.

### 6. Comparable Services

The Board of Directors believe that we are charging a consistent price for this strategy when compared to our offering in different markets.

### 7. Classes of units

The Board of Directors believe the share classes available for this fund and the associated charges are fair and appropriate.

An exercise was carried out in 2020 and 2021 to transfer investors from higher AMC charging class A into class B. Those investors who were originally in class A subsequently benefited from lower fees in class B.

### 8. Other considerations

We recognise that it is important for investors to be able to buy into and sell out of the fund without any liquidity obstacles. Therefore, providing liquidity to investors is an important input to the overall value offered by the fund. We believe this fund offers reasonable liquidity to investors.

Aegon Asset Management UK plc assesses fund liquidity levels under both normal and stressed liquidity conditions. We consider multiple factors including sector, region, credit rating, market capitalisation and bid/ask spreads when reviewing fund liquidity. This assessment is done in conjunction with consideration for investor concentration levels, investor type, performance levels, market events and collateral requirements when assessing fund liquidity levels, so there is a holistic understanding of the liquidity profile.

Under stressed liquidity environments, we convene daily liquidity meetings covering market liquidity, valuations, flows and potential outflows to proactively manage liquidity. Processes and procedures are in place to manage suspensions and return proceeds to investors as soon as possible.

We are also very active in the Corporate Governance of the securities held by the fund. We vote on all resolutions on behalf of the fund, and actively vote against proposals where we believe they are not in the best interests of our investors.

The Board of Directors believe that there is nothing to declare to investors from the assessment of other considerations.

**Past performance is not a guide to future performance. Outcomes, including the payment of income, are not guaranteed.**

Source: Lipper, as at 31 July 2023, B Inc (GBP) share class, NAV to NAV, noon prices, income reinvested, net of ongoing charges, excluding entry or exit charges.

**Performance comparator:** Investment Association Mixed 20-60 Sector. Investors are invited to compare the fund's performance against the performance of other funds within this Sector. Comparison of the fund against this Sector will give investors an indication of how the fund is performing compared with funds holding similar equity ranges. The comparison should be performed over a five-year period to provide the most useful medium term comparison.
