

Asset Management

AEGON SUSTAINABLE EQUITY FUND VALUE STATEMENT

**AEGON ASSET MANAGEMENT UK ICVC ('UK OEIC')
WITH A YEAR END OF 31 JULY 2023**

PUBLISHED NOVEMBER 2023

Introduction

The Value Statement is produced each year for funds in our UK product ranges, covering the 12-month period to 31 July 2023. The purpose of this value statement is to provide investors with a clear understanding of whether each fund offers value for money to its investors.

The following product range is in scope:

- Aegon Asset Management UK ICVC - ('UK OEIC') with a year end of 31 July 2023

Why do we produce a Value Statement?

The UK regulator, the Financial Conduct Authority ('FCA'), introduced rules in 2019 requiring asset management firms to consider, confirm and communicate whether they are delivering value for money in regard to the UK funds they are managing.

The FCA provided seven criteria that should be used in the assessment, which essentially cover quality of service delivered, costs, performance and how these compare to the market.

The Board of Aegon Asset Management UK plc takes responsibility for this process and has approved this statement. The Board of Directors is responsible for the overall governance of these UK funds. The Board of Directors includes external directors to ensure oversight and challenge of the funds is independent, comprehensive and in the best interests of investors.

The Chairman of the Board of Directors has overall responsibility for delivering this assessment.

As permitted by FCA regulations, we have elected to produce a combined Value Statement. This means we will produce Value Statements for the above product range as at 31 July 2023, to coincide with the UK OEIC fund range's annual reporting period.

The FCA requires managers to assess the following criteria:

- 1. Quality of service** - we consider some of the measurements within this section to be 'baseline' criteria. This includes factors such as:
 - a. ensuring the fund is managed within investment parameters, providing sufficient liquidity to enable investors to buy and sell the fund.
 - b. being readily available to investors, for example by phone, post or fax.
 - c. having a website that is accessible to all investors, which provides a variety of information to enable investors to understand the funds offered for investment.

- 2. Performance** - how each fund has performed, net of charges, over the past year and over the time period referred to in the fund's objective.

- 3. Annual Fund Management (AFM) costs** - highlighting the fund's charging components and whether these are appropriate.

- 4. Economies of scale** - the extent to which economies of scale have been achieved and whether they have been passed on to investors.

- 5. Comparable market rates** - how the fund's charges compare to similar funds in the industry.

- 6. Comparable services** - to ensure a consistent pricing structure is applied for similar funds at Aegon Asset Management UK.

- 7. Classes of units** - whether share classes, and their associated charges, are appropriate and available for investment.

- 8. Other considerations** - we assess other criteria that we consider are important in the assessment of each fund to ensure we conduct a comprehensive oversight in the interests of investors. Examples include liquidity and ESG considerations (see page 5 for ESG definition).

Update on funds not providing value in 2023

There were no funds deemed 'not providing value' in this given period.

We recognise that investment performance is only one element of our overall framework for assessing whether our products are offering value. However, the Board acknowledges that it has been a challenging period for our fund range, given the strong exposure we have to sustainable and ethical themes which, by definition, means we could not fully participate in other investment themes that have driven the returns of many market indices over the short term.

Helpful terms

Additional Charges

These are the charges on top of the Annual Management Charge ('AMC') that form part of the Ongoing Charges Figure ('OCF'). These items include audit fees and regulation fees.

Annual Management Charge ('AMC')

This is the charge by Aegon Asset Management UK plc for managing the fund and providing its overall service.

Investment objective

This describes what the fund is aiming to achieve over a stated period. Typically, this will be to achieve income and/or capital growth over a seven-year period.

Investment Association Sector

The Investment Association has created a range of sectors and has grouped funds deemed to have similar objectives and strategies into the same sector. For example, funds investing in UK smaller companies can be found in the Investment Association UK Smaller Companies Sector.

Environmental, Social and Governance (ESG)

Where relevant, we look to incorporate Environmental, Social and Governance (ESG) factors into the investment decision-making in our funds to mitigate risk and uncover opportunities.

While some funds are not explicitly mandated to make ethical value judgements or to impose ESG-related restrictions, the judgement we make reflects the extent to which we believe ESG issues impact a stock or bond's investment case, either positively or negatively. To do that, our fund managers/analysts draw upon the expertise of our dedicated responsible investment team with whom they work closely.

Responsible investment (RI)

This is an umbrella term that covers various tools and approaches to incorporating environmental, social and governance (ESG) considerations into investment decision-making processes. It may include ESG integration and active ownership as well as dedicated, RI-focused capabilities. Related terms may include sustainable or ESG investing. More information can be found in the Responsible Investment section of our website www.aegonam.com/responsible.

Liquidity

Funds invest in underlying securities according to their investment mandate. They also keep a small amount of cash to assist in payment of expenses incurred by the fund. Some underlying securities take longer to sell than others – this can be influenced by a range of factors, such as which index and country the security is purchased from, how many shares are in issue and market conditions. It can take from a few days to a couple of weeks to sell securities and receive the proceeds. However, there are instances where this can take longer.

Liquidity measures how quickly the fund can sell its holdings and receive the cash proceeds. Securities are generally sold to facilitate investor sell instructions. In extreme conditions, the fund may need to temporarily suspend dealing while it sells the required underlying holdings to facilitate the sell instructions. This can happen during extreme volatility, while the Portfolio Manager is seeking favourable prices and/or in instances when a significant proportion of the fund needs to be sold.

Performance comparators

Funds will generally be compared with their peers in the appropriate Investment Association Sector. The funds may also be compared against a benchmark index. In these instances, the benchmark may act as a constraint, a target or just for comparison purposes. In most instances the funds are measured against a benchmark index and/or Investment Association sector for comparison purposes. For example, the UK Sustainable Opportunities Fund's performance is compared with the Investment Association All UK Companies Sector.

Aegon Sustainable Equity Fund

Overall Value Assessment

The Board of Directors believe the fund provided value in all areas except fund performance, which was negatively impacted by the volatility seen in markets.

Aegon Asset Management UK plc Board continues to monitor fund performance, and will take appropriate remedial measures if necessary where performance issues arise.

1. Quality of Service

The Board of Directors believe that, based on the areas assessed, the fund offers a good quality of service.

2. Performance

The investment objective is to provide a combination of income and capital growth over any seven-year period.

We compare the fund's performance against the performance of other funds within the Investment Association Global Sector ("Comparator Benchmark"). The Comparator Benchmark is comprised of funds of a similar investment composition, but it should be noted that no distinction is made within the Comparator Benchmark between funds applying sustainability criteria and those that are not.

As a result of the style tilts they tend to possess, ESG-focused strategies largely struggled compared to non-ESG strategies over the review period. This means that the Comparator Benchmark, whilst offering an overview of the fund's performance against funds which are similarly weighted as regards to high level investment allocation, does not allow for a more granular level comparison against funds implementing ESG criteria.

The comparison should be performed over at least a seven-year period to provide the most useful long-term comparison.

The fund has met its objective over the seven-year period, although it underperformed the benchmark and Investment Association peer group sector median.

Over the 12-month period to 31 July 2023, the fund generated a significant negative return and underperformed the benchmark and Investment Association peer group sector median.

Over the 12-month period, inflation and central bank rhetoric remained key drivers of market volatility worldwide. Over the first half of the period, this resulted in growth stocks coming under significant pressure and materially underperforming their value counterparts.

The picture was different over the second half of the period though, as signs that inflation and interest rate expectations had peaked and were beginning to moderate in most developed markets spurred a comeback in growth stocks. Notably though, this has been very much focused in a small number of large-cap, US-listed, tech-related stocks, which have accounted for a sizable proportion of the market's 2023 gains. In contrast, small and mid-cap stocks have continued to struggle for traction, having suffered a torrid time in 2022.

Another notable factor over the review period has been weakness in Chinese equities. The world's second largest economy was held back by Covid-19-related lockdowns which lasted for much longer than in other countries. When regulations were eventually loosened at the end of 2022, many predicted a sharp rebound but this has failed to materialise. Serious worries about the state of the country's all-important property sector have also weighed on sentiment, meaning Chinese indices have significantly underperformed their global counterparts.

The fund's style was a major headwind over the period. Our bias towards small and mid-cap growth companies meant the fund was heavily exposed to these areas of the market that fared worst in 2022 and have struggled to regain momentum in 2023. While growth has recovered somewhat in the first half of 2023, this has been of limited benefit to the fund as it has been overwhelmingly driven by a handful of mega-cap US-listed stocks – an area where we have little exposure.

In addition to the tough market backdrop, stock selection was also weak over the period and the fund suffered from sharp falls in some of its holdings as their operational performance deteriorated, causing forecasts to be downgraded.

On a brighter note, the fund's sector weightings added value over the period. Our heavy weightings in tech and industrials were beneficial, as was the lack of exposure to consumer staples. In contrast, our large weighting in healthcare was detrimental to performance as the sector failed to keep pace with the market rally.

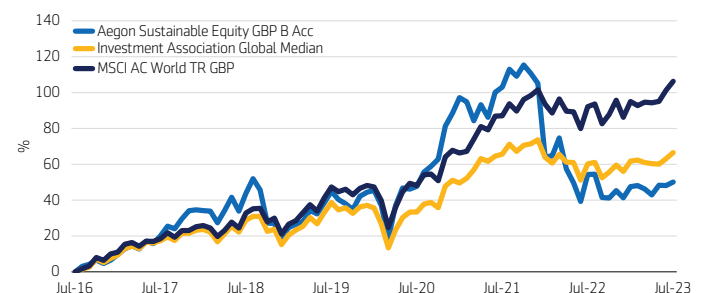

We continue to focus on disciplined stock selection as a means of adding value to the fund and our long-term approach means we look to not overreact to short-term market rotations when there is no change to the underlying investment cases for our holdings. That said we recognize that the market backdrop is significantly different now, compared to the start of the period, so we have looked to take sensible action to adapt the portfolio to this backdrop, whilst retaining its distinctive style. This action has largely consisted of reducing exposure to some of the very high growth, higher risk positions in the portfolio in favour of more established, steady growth companies, which we think are better placed in the current backdrop.

Performance of the fund covering different times periods can be found in the factsheet.

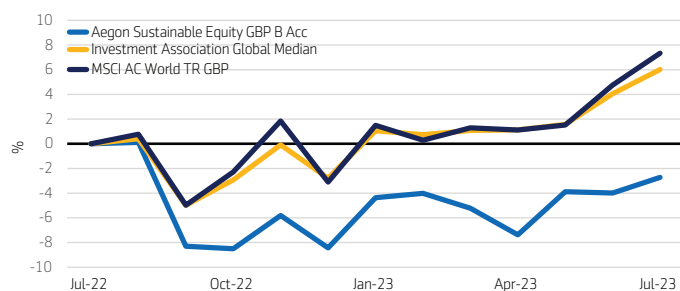

Below is a link to the latest factsheet for the fund:

7 year performance chart

1 year performance chart

The Board of Directors believe that over the longer term (seven years to 31 July 2023) the fund has met its objective.

3. AFM Costs

There are no entry costs, exit costs or performance fees associated with this fund. Below are the costs incurred by an investor in each share class of the fund:

	B share class (%)	S share class (%)
Annual Management Charge	0.75	0.40
Additional Charges	0.04	0.04
Ongoing Charges	0.79	0.44

Trading in mid-cap and small cap equities held by the fund can at times result in higher transaction costs than large cap equity funds.

The Board of Directors believe that the charges are justified in the context of the overall value delivered to the investors in the fund.

4. Economies of Scale

The Board of Directors have assessed economies of scale ('EoS') for the fund considering various factors, in line with our value assessment framework. The Board of Directors believe that there are two key areas where benefits can be delivered to investors, namely a) global organisational structure and b) efficiencies due to increasing fund size.

Aegon Asset Management is a global organisation whereby pooled research, pooled resources and mainly globally negotiated vendor contracts are utilised. In the absence of being part of a global structure, the fund would be likely to have higher costs.

The Board of Directors believe that, with more assets in the fund, benefits can be passed on to fund investors. Certain legal, regulatory and administrative costs are fixed (i.e. not directly related to fund size) and are directly charged to the fund. Therefore, with increasing fund size, the relative impact of these costs is reduced.

Due to the current size (around £174 million) of the fund, we do not believe there are sufficient benefits to reduce the already competitive Annual Management Charge ('AMC'). However, as part of the annual value assessment, we will continually review the position and pass on benefits to investors where possible.

5. Comparable Market Rates

The Board of Directors compared the fund's Annual Management Charge ('AMC') and Ongoing Charges Figure ('OCF'), at a share class level, against other relevant funds within the same Investment Association peer group.

Source: Lipper, as at 31 July 2023, B Acc (GBP) share class, NAV to NAV, noon prices, income reinvested, net of ongoing charges, excluding entry or exit charges.

Performance comparator: Investment Association Global Sector. Investors are invited to compare the fund's performance against the performance of other funds within this Sector. Comparison of the fund against this Sector will give investors an indication of how the fund is performing compared with funds investing in a similar but not identical investment universe. The comparison should be performed over at least a seven-year period to provide the most useful long term comparison.

While the AMC is in line with the Investment Association sector median, the OCF is materially below the Investment Association sector median due to the Board of Directors' decision to absorb significant costs into its own cost base, namely the Transfer Agent and Fund Accounting costs, which is more favourable to investors than normal market practice. Investors can see this when they compare the fund to similar funds managed by other providers.

The Board of Directors believe that the fund's costs are fair, reasonable and very competitive.

6. Comparable Services

The Board of Directors believe that we are charging a consistent price for this strategy when compared to our offering in different markets.

7. Classes of units

The Board of Directors believe the share classes available for this fund and the associated charges are fair and appropriate.

An exercise was carried out in 2020 and 2021 to transfer investors from higher AMC charging class A into class B. Those investors who were originally in class A subsequently benefited from lower fees in class B.

8. Other considerations

We recognise that it is important for investors to be able to buy into and sell out of the fund without any liquidity obstacles. Therefore, providing liquidity to investors is an important input to the overall value offered by the fund. We believe this fund offers reasonable liquidity to investors.

Aegon Asset Management UK plc assesses fund liquidity levels under both normal and stressed liquidity conditions. We consider multiple factors including sector, region, market capitalisation and bid/ask spreads when reviewing fund liquidity. This assessment is done in conjunction with consideration for investor concentration levels, investor type, performance levels, market events and collateral requirements, so there is a holistic understanding of the liquidity profile.

Under stressed liquidity environments, we convene daily liquidity meetings covering market liquidity, valuations, flows and potential outflows to proactively manage liquidity. Processes and procedures are in place to manage suspensions and return proceeds to investors as soon as possible.

We are also very active in the Corporate Governance of the securities held by the fund. We vote on all resolutions on behalf of the fund, and actively vote against proposals where we believe they are not in the best interests of our investors.
